Abstract

The Chess Game is praised worldwide though unjustifiably as an intellectual sport game par excellence. But at a more closer examination chess is revealed to be a game structurally and conceptually heavily mistaken, defective and full of failures on the side of its inventor. The present paper examines in great details all the mistakes, defects, and failures in its structure and conception since its invention.

Keywords: *Chess Game, king-figure, Mistakes, Defects, Failures etc.*

Introduction

As regards chess game, any healthy person endowed with common sense can unmistakably draw the following conclusion: Chess is tailored for unevolved, intellectually limited, small brained, thoughtless, delusional, autistic, anti-objective, anti-realistic, anti-dialectically thinking individuals, like oxy-feminists, AI robot-machines, and masculine morons, especially.

This conclusion emerges from the structure of the chess game itself, and the very concept of the king-figure and its falsely defined anti-realistic role in an imagined combat between two armies. As is well known, the main objective of the chess game is to capture and imprison the opponent's king-figure, but alas!

Discussion

The kingly archetype upon which his character and subsequently his role in the game is conceived quite arbitrarily, without any reference to real life situation, and stands for an impotent, disabled, unmanly ruler, fit to move one step (viz. one field) only, behaving not as a man should do, but rather like a sick woman in labor. Additionally, the king-figure is allowed to make the so-called Rochade¹-movement, viz. changing his own place position with the nearest tower-figure, thus actually, hiding himself behind the tower like a coward. Is such a cowardly person acceptable to be recognized and pronounced a king at all? At the same time, his mate the queen-figure as a rule is intended to go a-whoring while moving horizontally, vertically, and diagonally, completely freely without any restriction. Thus, the whole concept is modelled after the life in a bee colony whereby the preeminently passive male mate of the bee-queen serve only to donate his sperm for the colony procreation and then dies immediately after the act. Incidentally, with regards to female rights activism in his own time, Nikola Tesla, a famous American physicist and inventor, commented that human society in a future perspective will resemble a bee colony.

This concept of an impotent passive is analogous to biblical Adam, the first man in Genesis chapter 3., who used to lie under the tree like a woman in labor, passively awaiting for his

¹ As for the specific chess terminology, the expression "Rochade" denotes, "moving of the king in chess from its own square two empty squares to one side and then, in the same move, bring the rook from that side to the square immediately past the new position of the king".

wife Eve to bring him food and feed him, just like a little suckling seeks his mom to give him tit to suckle. This is undoubtedly an atavism and relict of the matriarchate past, and at the same time a sign of the childish trauma Moses (the author of Genesis) underwent himself, ever since having been adopted by the idle Egyptian princess Hatshepsut (who later pronounced herself a Pharaoh with an artificial beard like a man) as one of her pets, but lacking in true motherly love.

However, the above concept contradicts all the findings of archeological and anthropological sciences, which unanimously have proven unquestionably the role of ancient man primarily as hunter-gatherer (quite a different role from a woman in labor since man does not bear children), and this is approved also by the way of life the primitive aborigines of Brazilian jungles, Borneo and Australia still lead even today.

Thus, man is naturally destined not to lie and await behind like a woman in labor, but to act as a leader in hunting, and in combat as well. And this is the role of a real and true king. The archetype of a real king is the example of unsurpassed, unequalled, incomparable Alexandros ho Megas, viz. Alexander the Macedon, also known as Alexander the Great, famous among all the nations, regardless of their religion, be it Christianity, Islam, Judaism, Hinduism, etc., who used personally to lead his army in every combat fighting at its head. The memory of Alexander's feats is so great that many nations proclaim him as their own, especially those primitive Slavic tribes (without glorious past of their own) of the Balkan peninsula, viz. the so-called Northern Macedonians (they emerged as a nation only after the WW II under communist rule in the former Yugoslavia, though actually a Bulgarian-South Serbian mixed ethnic tribe, speaking a Bulgarian dialect with Serbian admixture), which have genetically nothing in common with Alexander of ethnic Greek origin. Moreover, the Serbians (viz. Serbs from Serbia) with an exceeding degree of insatiable vanity speak of Alexander as one of their own, i.e. 'Our Aca' (pronounced approximately like Uhtsah in English), the abbreviated form 'Aca' being an hypocoristic of Alexander. The Serbians habitually named several of their kings after Alexander, and quite nonsensically they even give the name Alexandra to their daughters.

As for Alexander, he had no queen (like a sultan) but only concubines and slave-girls, women were just an entertainment tool to him, his being a kind of a sport-fucker in his spare

time. Consequently, following Alexander's example, man should train himself in sexual yoga, particularly in vajroli-mudra, and sexual kung-fu known as penile weight lifting, all of which contribute most beneficially to man's brain capacity.

In the context of chess playing, the experience from the former communist states USSR and Yugoslavia (Serbia in particular), brings forward hard evidence of serious intellectual shortcomings and disadvantages the chess playing had on all participants in the game, and on society in general. It is a well known fact that communists strongly believe in chess playing as an extraordinary intellectual activity which improves greatly one's brain capacity. But the attested examples from USSR and Serbia prove unanimously that chess playing makes actually men more dull, foolish, and moronic beyond imagined limits. As is known USSR and Yugoslav chess-players were the leading ones in the world during communist rule. But in point of fact, their presumed intellectual prowess did not help to prevent either communist USSR or Yugoslavia from collapsing. The Russian communists even created arbitrarily a monster state of Ukraine thus allowing the USA and NATO alliance to fight Russia at her very doorstep. Moreover, Yugoslavia has dissolved in a series of bloody conflicts, thanks predominantly to Serbia and their leaders (apparently lacking heavily in intellectual capacity).

On the other hand, USA has never been an important exponent of the chess playing, but have outwitted the Russians in every respect with their vitally important intellectual properties, like Coca-Cola, Hollywood movies, Jazz, Blues, Rock-n-roll, Internet, Smartphones, etc. Neither Russians nor Serbians except a few of meaningless sport participants (in lawn tennis, water polo, basketball) have anything valuable to offer to the rest of the world. On the other hand, USA has never been an important proponent of the chess playing, but have outwitted the Russians in every respect with their vitally important intellectual properties, like Coca-Cola, Hollywood movies, Jazz, Blues, Rock-n-roll, Internet, Smartphones, etc. Neither Russians nor Serbians except a few of meaningless sport participants (in lawn tennis, water polo, basketball) have anything valuable to offer to the rest of the world. The Serbians even falsely claim the famous world scientists Nikola Tesla, Michael Pupin, and Milutin Milankovitch to be of Serbian origin. But though they were ethnic Serbs, they were in fact Austro-Hungarian citizens, Tesla and Milankovitch born in Croatia, Pupin in Hungary (then both states were constitutive parts of the Austro-Hungarian empire), they went to Croatian and Hungarian schools and had learned sciences in the

Austrian centers of learning in Graz, Vienna, and Prague in Bohemia. If they were born in Serbia, an undeveloped and retrograde country, they had in prospect only to become outlaws, terrorists, and thoughtless and brainless assassins, like Gavrilo Princip, an ethnic Serb from Bosnia, by whom in 1914 the Austrian heir of the throne prince Ferdinand and his wife Sophia (significantly meaning Wisdom, of which the Serbians and Bosnian Serbs themselves are permanently lacking in) were assassinated in Sarajevo (under direct influence of the Serbian government) thus starting the horrible WW I. Serbia and the Serbians seem to be permanently the main problem of the Balkans and Europe in general. Apparently, the much-praised chess game playing has not contributed to the expected improvement of their bad way of thinking at all. Incidentally, the Serbians and their chief strategists Ilija Savić alias Garašanin, who wrote in 1848 a pamphlet called Načertanie, viz. The plan of creating Great Serbia in accordance with his well-known maxim All the Serbs into One State, actually invented the ideology of Nazism (rhyming as Nazi Serbianzi, spelled Naci Srbijanci in Serbian) and not Adolf Hitler, who used the analogous maxim All the Germans into One State, as a pretext in annexing Austria in 1938 and parts of Bohemia to his Third Reich. Unfortunately for all the nations of the Balkans, the Serbian leaders misused the same ideology during the conflicts in the former Yugoslavia.

It is significant that Marshal Tito, an extraordinarily expert in dialectics, and a military and political strategist par excellence, who wisely broke his ties with the Russian dictator Stalin, as a key-figure of the world non-aligned movement, and a proponent of peaceful coexistence between nations, and the life-long president of the former Yugoslavia (till his death in 1980), he did never seriously engage himself in chess playing. For as an expert strategist he was well aware of utter futility and falseness of the principles on which the chess game has been founded.

Conclusion

All of these are sound reasons for a man not to be involved into chess games playing, but should instead leave it to those unevolved, dull minded, pathetic individuals, like Russian and Serbian communists, nowadays replaced by their becoming Orthodox Christian fundamentalists again, who like formerly communists vainly believe in their own superiority over all others.
